           This sequence represents a Leptospira DNA sequence isolated from the pathogenic Leptospira (LS) bacterium of the invention. The bacterium belongs to serogroup Hurstbridge or serovar hurstbridge or the species L. fainei. The LS bacteria can be used for conferring protective immunity against pathogenic LS bacteria in humans or animals. The bacteria can also be used for prophylactic or therapeutic treatment of infections. The DNAs and antibodies may also be used for detection and

                                                                                                                                                      This sequence represents a Leptospira DNA sequence isolated from the pathogenic Leptospira (LS) bacterium of the invention. The bacterium belongs to serogroup Hurstbridge or serovar hurstbridge or the species L. fainei. The LS bacteria can be used for conferring protective immunity against pathogenic LS bacteria in humans or animals. The bacteria can also be used for prophylactic or therapeutic treatment of infections. The DNAs and antibodies may also be used for detection and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps
New isolated pathogenic Leptospira bacterium - useful for, e.g developing products for conferring protective immunity, and for prophylactic or therapeutic treatment

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  This DNA sequence comprises the maize 233 Zm41-A gene. This is an orthologue of Arabidopsis Ms41-A (see 190522), a gene that confers male fertility. It was obtained following a database search for sequences that showed homology to Ms41-A DNA, isolation of a partial cDNA clone, and use of this clone to isolate Zm41-A genes (Z 231 (190542), Z33 (190543) and Z35 (190544) from genomic lambda libraries. The genes show a high level of conservation. Z35 may be derived from Z31 via genetic rearrangements, deletions and/or insertions. Z33 has subsequent deletions from Z35 and is truncated, having only exons 3, 5 and 6. The Ms41-A and Zm41-A genes, antisense or ribozyme sequences can be used to produce transagenic plants with controlled male fertility. Male sterile plants are useful for hybrid seed production, particularly in plants where restoration of fertility is not needed, e.g.

```
209048) which encodes a secreted human protein. The gene can be used to generate fusion proteins by linking to the gene to a human immunoglobulin Pc portion (e.g. v59501) for increasing the stability of the fused protein as compared to the human protein only.

The invention relates to 186 novel genes and their fragments (nucleic acid sequences: v95311-v85012; amino acid sequences WA7731-W73056) which are useful for preventing, treating or ameliocating medical conditions e.g. by protein or gene therapy. Also, pathological conditions can be diagnosed by determining the amount of the new polypeptides in a sample or by determining the presence of mutations in the new polynucleotides. Specific uses are described for each of the 186 polynucleotides, based on which tissues they are most highly expressed in (see V5511 for described
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     This sequence encodes a Borrelia burgdorferi (Bb) protein of the invention, which is suitable for use in a vaccine. The Bb polyeptides can be used in vaccines for eliciting protective antibodies to members of the Borrelia genus, particularly for the use against Lyme disease in manans and animals. They can be used for preventing or attenuating an infection caused by a member of the Borrelia genus. The products can also be used for detection of members of the Borrelia genus.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New isolated Borrelia burgdorferi nucleic acids - used to develop products for the diagnosis, prevention and treatment of diseases caused by Borrelia, particularly Lyme disease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Antigenic protein; vaccine; Lyme disease; infection; detection;

The enzyme catalyses the formation of malonyl-CoA from acetyl-CoA and bicarbonate, and requires a biotin malonyl-CoA from acetyl-CoA and bicarbonate, and requires a biotin prosthetic group for activity. The enzyme is inhibited by several prosthetic group for activity. The enzyme is inhibited by several herbicides (e.g. fluazifop and sethoxydim) in monocotyledons. The herbicides (e.g. fluazifop and sethoxydim) in monocotyledons. The sequence is a 2-kb EcoAI fragment of phage lambda-gtll clone 15-14, sequence from a maize-inbred A188 seedling cDNA library by tash isolated from maize ACCase antiserum. Probes generated from the screening with maize ACCase antiserum. Probes generated from the siste domain (T17112) and the biotin binding transcarboxylase active site domain (T17112) and the biotin binding site domain (T17113) coding sequences may be used to screen plants for similar genes. An expression cassette containing the gene, a mutant or an antisense DNA sequence may be combined with a plant

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      portion of a maize acetyl con carboxylase (ACCase) gene located at portion of a maize acetyl codo carboxylase (ACCase) gene located at bases 2883 to 83 from the 3' stop codon. Clone #15-14 was isolated from a lambda gtil cDWA library of maize inbred A186 seedlings by from a lambda gtil cDWA library of maize inbred A186 seedlings by screening with maize ACCase antiserum. Other ACCase DNA fragments screening with maize ACCase antiserum. ACCase DNA can be incorporated (W05590) have also been isolated. ACCase DNA can be incorporated into a vector and used to increase the herbicide tolerance or oll into a vector and used to increase the herbicide tolerance or oll heterologous systems.
                                                                                                                                                                                                                                                                                                                                               Gaps
promoter, e.g. a cauliflower-mosaic virus 35S promoter or mopaline-synthase promoter, and N-terminal maize chloroplast transit peptide sequence in a plasmid vector for high-level tissue-specific gene expression, to confer herbicide resistance and/or alter the oil content of the plant, or to increase the plant and/or alter the oil content of the plant, or to increase the plant and paid, so that the crystallized enzyme may be used to screen and identify other herbicides that bind to and inhibit the enzyme.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     A 2 kb EcoRI fragment (T39904) of lambda clone #15-14 includes a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        encoding maize acetyl coenzyme A carboxylase gene - used for
in. of plants with herbicide tolerance or altered oil content

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present DNA sequence is a 2kb EcoRI fragment of lamda clone #15-14 including a portion of a maize acetyl CoA carboxylase (ACCase) gene located at bases 2883 to 83 from the 3' stop codon. AcCase is involved in fatty acid synthesis and is the target of the specified herbicides. Transformation of plants with ACCase imparts resistance to cyclohexanedione and aryloxyphenoxypropanoic acid herbicides and alter the oll content. The ACCase DNA is also used as source of probes and primers for the identification of transgenic plants; in marker-assisted plant selection and for restriction fragment length polymorphism mapping, used for high-energy animal feed and high-fiber, low-fat human
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New DNA encoding acetyl-CoA carboxylase from oats, used to produce transformed plants with herbicide resistance and altered oil content

This DNA, isolated from Mycobacterium leprae, encodes a precursor (immature) gyrase protein from which an "intein" (see W15074) is excised during maturation. The gyrase and its coding sequence are useful to fabricate products that alter the maturation of proteins essential for the development of infectious agents by altering the protein splicing of precursor polypeptides of the proteins. The inteins encoded by the gyrasenes of Mycobacterium leprae, M. flavescens, M. gordonae and M. kansasii are used: (a) to modify the genome of a eukaryotic call that lacks endogenous biological activity identical to that of the polypeptide; (b) to replace a copy of a gene present in a recipient genome by integration of a gene different from that where the integration takes place; and (c) for targetted insertion of a foreign DNA sequence into a selected site in the genome of a eukaryotic cell not containing the specific cleavage sites of the polypeptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps

```
The sequence is that of the A3 acetyl coA carboxylase (ACCase) CDNA maize cloue which can be used to probe plant DNA to isolate other such clones. It may be used with plant regulatory sequences to such clones. It may be used with plant regulatory sequences to requested to assettes for ACCase. These cassettes are used to produce expression cassettes for ACCase. These cassettes are used to composition of seeds or other plant parts, e.g. enabling oil.

CC the composition of seeds or other plant parts, e.g. enabling oil.

CC bearing plants such as oilseed rape, sunflower or oilpalm, having a lower or modified oil content to be produced. It can be used to form lower or modified oil content to be produced. It can be used to form cassettes for overexpression of ACCase., leading to produ. CC of plants with an increased oil content. It may also be used to recover the ACCase expression of moncotyledonous plants can be made to inhibit ACCase expression. Moncotyledonous plants can be made consistent to grass-weed herbicides such as fluazifop and alkylketones resistant to grassion of moncot ACCase, expression of dict acheived by overexpression of moncot ACCase, expression of dict content to these herbicides. This is content which weeds growing between the plants. This allows the overall destroy weeds growing between the plants. This allows the overall destroy weeds growing the method, weeds such as wild oats may be previous crop. Using the method, weeds such as wild oats may be previous crop. Using the method, weeds such as wild oats may be previous error and the farmer is given extra options to obtain an improved controlled, and the farmer is given extra options to more effective.

The complete sequence was deduced from CDNA clone #18-5, obto. from a lambda gtll cDNA library of maize inbred A188 seedlings, and from PCR amplifications (see also T39918-23). Genomic ACCase DNA fragaments have also been isolated (see also T39906-16). ACCase DNA regaments have also been isolated (see also T39906-16). Accase DNA herbicide tolerance or oil content of a transgenic plant, or used

This cDNA encodes a maize ACCase enzyme. This can be used in a method of preparing an herbicide resistant corn plant which comprises crossing a first corn plant to a second corn plant so as to yield a progeny plant, where the first corn plant comprises at least 1 herbicide resistant allele and the second plant comprises at least 1 herbicide resistant allele which is not allelic to the herbicide resistant allele present in the first plant. The herbicide resistant corn plants are prepared using Acc1 and Acc2 gene combinations which impart cylcohexanedione (CHD) or aryloxyphenoxypropanoic acid (APA) herbicide tolerance to the corn plants. The methods are used to impart cillo and APA herbicide tolerance to corn plants and to produce CHD or APA herbicide tolerant Zea mays (Corn) homozygous or heterozygous for Acc1 and homozygous or heterozygous for Acc1 and homozygous or heterozygous for Acc2. The methods can also be used to impart tolerance to a corn plant to an agent which inhibits acetyl COA carboxylase, selected from 3.(2.4-dichlorophenyl)-perhydroludolizine-2,4-dione, 3-isopropyl-6.

                                                                                                                                                                                Accase is involved in fatty acid synthesis and is the target of the specified herbicides. Transformation of plants with Accase imparts resistance to cyclohexamedione and aryloxyphenoxypropanolc acid herbicides and alter the oil content. The Accase DNA is also used as source of probes and primers for the identification of transgenic plants; in marker-assisted plant selection and for restriction fragment length polymorphism mapping, used for high-energy animal feed and high-fiber, low-fat human food and in genetic dissection of the groat
                                                                                                                                                             The present cDNA sequence encodes maize acetyl COA carboxylase (ACCase).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps
New DNA encoding acetyl-CoA carboxylase from oats, used to produce transformed plants with herbicide resistance and altered oil content
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence 4,

Sequence 1, Application US/08874162
Patent No. 5872216
GENERAL INFORMATION:
APPLICANT: Hannah, L. Curtis
APPLICANT: Giroux, Michael
TITLE OF INVENTION: Materials and Methods for Increasing
TITLE OF INVENTION: Corn Seed Weight
NUMBER OF SEQUENCES: 5
CORRESPONDENCE ADDRESS:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         MEDIUM TYPE: Floppy disk
COMPUTER: IBM PC compatible

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         δ
               Sequence 19, Application US/08303004
Patent No. 5556955
GENERAL INFORMATION:
APPLICANT: Vergnaud, Gilles
TITLE OF INVENTION: Process for Detection of New Polymor-
TITLE OF INVENTION: phic Loci in an ADN Sequence, Nucleotide Sequences Forming
TITLE OF INVENTION: Hybridisation Probes and Their Biological Applications
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Length 14;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Indels
                                                                                                                                                                                                                                                                                           COUNTRY: U.S.A
ZIP: 22320
COMPUTER REDABLE FORM:
MEDIUM TYPE: Floppy disk
COMPUTER: IBM PC COMPATIBLE
COMPUTER: SYSTEM: PC-FOS/MS-DOS
SOFTWARE: PACENTIN Release #1.0, Version #1.25
CURRENT APPLICATION DATA:
APPLICATION NUMBER: US/08/303,004

                                                       Sequence 1367, Application US/08585684B

Patent No. 5877021

GENERAL INFORMATION:
APPLICANT: Stinchcomb, Daniel T.
APPLICANT: ATAINS, Thale
TITLE OF INVENTION: METHOD AND REAGENT FOR THE
TITLE OF INVENTION: METHOD AND REAGENT FOR THE
TITLE OF INVENTION: AND REVERSAL OF IMMUNE RESPONSES
NUMBER OF SEQUENCES: 2751
CORRESPONDENCE ADDRESS:
ADDRESSEE: Lyon & Lyon
STREET: 633 West Fifth Street
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     GENERAL INFORMATION:

                                                              ГS
  This sequence represents a Leptospira DNA sequence isolated from the pathogenic Leptospira (LS) bacterium of the invention. The bacterium belongs to serogroup Hurstbridge or serovar hurstbridge or the species L. fainel. The LS bacteria can be used for conferring protective immunity against pathogenic LS bacteria in humans or animals. The bacteria can also be used for prophylactic or therapeutic treatment of infections. The DNAs and antibodies may also be used for detection and diagnosis of past or present LS infection.
                                                                                                                                                                                                                                                                                                                                                              SAGE tag; serial analysis of gene expression; antigen-presenting cell; APC; monocyte-derived dendritic cell; differential gene expression; immunostimulatory cofactor; costimulatory factor; CTL; cytotoxic T-lymphocyte; tumour antigen; immunotherapy; anticancer; ss.

Sequences 27573-279709 represent SAGE (serial analysis of gene expression) tags used to identify mRNA transcripts encoding cypressed in monocyte-derived dendritic cells compared differentially expressed in monocyte-derived dendritic cells compared with monocytes. Some of the transcripts correspond to known genes or ESTS (expressed sequence tags) which were previously unknown to be preferentially or differentially expressed in dendritic cells, while preferentially or differentially expressed in dendritic cells, while correspond to novel genes. Antigen-presenting cell other transcripts correspond to novel genes. Antigen-presenting cell other transcripts correspond to novel genes. Antigen-presenting cell chart continuous antigen presentation via the MRC (major histocompetability complex) and subsequent recognition by T-cell receptors is alone complex) and subsequent recognition by T-cell receptors is alone insufficient to activate a robust cytocoxic immune response that can lyse complex) and subsequent recognition by Cofactors also being required for the tumour cells, immunostimatory refactors also being required for sequences; identified using the SAGE tags have several potential uses. They may be used in vaccines to induce an immune response, particularly against a tumour antigen; to induce an immune response, particularly adainst a tumour antigen to modulate the genotype of an APC; confidential users, or of their encoded proteins, can be used to dentify expressed genes, or of their encoded proteins, can be used to an expression of these genes. Detection of the dentitic cell differentially expressed genes, or of their encoded proteins, can be used to antigen specific effector cells and become antigen specific effector cells and each of antigen-specific effector cells and each of antigen-specific effector cells, and vectors containing the propulation of antigen-specific effector cells, and vectors containing to the mare used in active immunotherapy (or to stimulatory factors ensures adequate antigen presentation 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö.

that are preferentially transcribed in the metastatic breast tumour that are preferentially transcribed in the metastatic breast tumour cells). Issue (i.e. are upregulated in metastatic breast tumour cells). Edsignate to 286677 represent tags corresponding to distinct transcripts that are preferentially transcribed in the primary or non-metastatic breast tumour tissue (i.e. are downregulated in metastatic breast tumour cells). These transcripts can be used for diagnosis, prognosis, monitoring and treatment of breast cancer, particularly where metastatic. Diagnosis is by standard immunoassays or hybridisation/amplification reactions. Or of preferential modulate expression of the transcripts are potentially useful for treatment of (metastatic) breast cancer, while promoters from the transcripts are used to direct expression, in selected cell types, or e.g. therapeutic genes (also ribozymes or antisense sequences), particularly an antigen-encoding sequence for use in gene or call-based vaccines; for diagnosing breast cancer and for raising specific cantibodies (Ab). Ab are used to detect the polypeptides or as therapeutic agenticals that produce the polypeptides can be used to expand and isolate populations of educated, antigen-specific immune effecter fumnor became the polypeptides can be used to expand the paracells that produce the polypeptides can be used to expand the metastatic calls, e.g. cytotoxic T lymphocytes, and these used for adoptive
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Isolated polynucleotides differentially expressed between metastatic and non-metastatic breast cancer cells, useful for diagnosis,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps

Metastatic breast tumour cell upregulated transcript tag #2351.

07-APR-2000 (first entry)

283117;

```
Tablo 10 28391 represent tags corresponding to distinct transcripts that are preferentially transcribed in the metastatic breast tumour cells). 283942 tepresent tags corresponding to distinct transcripts that are to 286677 represent tags corresponding to distinct transcripts that are preferentially transcribed in the primary or non-metastatic breast tumour cells). These transcripts can be used for diagnosis, prognosis, monitoring and transcripts can be used for diagnosis, prognosis, monitoring and transcripts can be used for diagnosis, prognosis, monitoring and transcripts can be used for diagnosis, prognosis, monitoring and treatment of breast cancer, particularly where metastatic Diagnosis is by standard immunoassays or hybridisation/amplification reactions. Compounds that modulate expression of the transcripts are potentially useful for treatment of (metastatic) breast cancer, while promoters from the transcripts are used to direct expression, in selected cell types, of e.g. therapeutic genes (also ribozymes or antisense sequences), particularly an antigen-encoding sequence for use in gene or cell-based vaccines; for diagnosing breast cancer and for raising specific continuousles (Ab). Ab are used to detect the polypeptides or as therapeutic agentic. Host cells that produce the polypeptides or as therapeutic agents. Host cells that produce the polypeptides can be used to expand and isolate populations of educated, antigen-specific immune effecter immune breast.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              280767 to 283941 represent tags corresponding to distinct transcripts
                                                                                                                                                                                                                                                                                                                                                                                                           Isolated polynucleotides differentially expressed between metastatic and non-metastatic breast cancer cells, useful for diagnosis, prevention and treatment of cancer -

```
that are preferentially transcribed in the metastatic breast tumour tissue (i.e. are upregulated in metastatic breast tumour cells). 283942

tissue (i.e. are upregulated in metastatic breast tumour cells). 283942

to 286677 represent tags corresponding to distinct transcripts that are preferentially transcribed in the primary or non-metastatic breast tumour tissue (i.e. are downregulated in metastatic breast tumour cells). These transcripts can be used for diagnosis, prognosis, monitoring and transcripts can be used for diagnosis, prognosis, monitoring and treatment of breast cancer, particularly where metastatic. Diagnosis is by standard immunoassays or hybridisation/amplification reactions.

Compounds that modulate expression of the transcripts are potentially useful for treatment of (metastatic) breast cancer, while promoters from the transcripts are used to direct expression, in selected cell types, cell e.g. therapeutic genes (also ribozymes or antisense sequences), particularly an antigen-encoding sequence for use in gene or cell-based vaccines; for diagnosing breast cancer and for raising specific antibodies (Ab). Ab are used to detect the polypeptides or as therapeutic agents. Host cells that produce the polypeptides or as therapeutic agents. Host cells that produce the polypeptides on be used to expand and isolate populations of educated, antigen-specific immune effecter immuncherse.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present invention describes the detection of drug-selected mutations in the HIV protease gene. The method of detection allows the simultaneous characterisation of a range of codons involved in drug resistance using sets of probes optimised to function together in a reverse-hybridisation assay. 297517 to 297997 represent specifically claimed probes for use in che assay, and 29479 to 297501 represent specifically claimed HIV protease gene polymorphic nucleotide sequences. 297502 to 297515, and 298004 to 298007, represent PCR Finers for the HIV protease gene, and 297516 represents an HIV protease probe used in an example from the cresent invention. The method, probes and primers can be used for the detection of drug selected mutations in the HIV protease gene. The method allows the simultaneous characterisation of a range of codons involved in drug resistance. The method may also be used for HIV protease genotyphing assays. The probes are able to discriminate between wild type and mutated protease sequences. The method allows rapid and

consecutive cytosines; do not contain two sequences of three consecutive nuclectides each able to form three H bonds to three consecutive cytosines, and the ratio between residues able to form two H-bonds each (2R) or three such bonds (3R) is given by 2R/3R = 0.33-0.72. The oligonoclectides are used to modulate expression of genes, particularly the genes for p53, ErB-2, junB, junD, 7GF-beta 1 or beta 2 to control proliferation of primary cell cultures (e.g. bone marrow stem, liver or bigonuclectides can also be used to analyse function of proteins (by altering their expression or activity) and therapeutically e.g. in cases of cancer or (targeting TGF) for stimulating the immune system.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             the rb gene. Of these, only oligonucleotides V49008-52 regulted in effective downregulation of negative growth control by rb, while oligonucleotides V49052-236 had little effect. The oligonucleotides exemplify the invention. The specification describes oligonucleotides that contain 8-30 nucleotides, which contain at most 8 nucleotides that can each form three hydrogen bonds to cytosine; do not contain four consecutive nucleotides able to form three H-bonds each to four
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   in the HIV protease gene. The method of detection allows the simultaneous characterisation of a range of codons involved in drug resistance using sets of probes optimised to function together in a reverse-hybridisation assay. 297517 to 297997 represent specifically claimed probes for use in the assay, and 297479 to 297501 represent specifically claimed HIV protease gene polymorphic nucleotide sequences. 297502 to 297515, and 297516 represents an HIV protease gene, and 297516 represents an HIV protease probe used in an example from the present invention. The method, probes and primers can be used for the method allows the simultaneous characterisation of a range of codons involved in drug resistance. The method may also be used for HIV protease genotyping assays. The probes are able to discriminate between all drug appropage genotyping assays. The probes are able to discriminate between
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          present invention describes the detection of drug-selected mutations

The sequences given in Q51825-2266 represent areas of mRNAs which are associated with development or maintenance of chronic myelogenous leavenia (CML), promyelocytic leukemia, Burkit's lymphoma, or cluck lymphocytic leukemia, follicular lymphoma, B-call acute lymphocytic leukemia, follicular lymphoma, B-call acute lymphocytic leukemia, breast cancer, colon carcinoma, neuroblastoma and lung cancer. The full length mRNAs contraining these target caquences, encode aberant cellular proteins which are able to control cellular proliferation and are directly linked to a leukemic phenotype. These target sequences are identified by the ribozyme of the invention. The ribozymes is formed in a hammerhead motif, but may also be formed in the motif of a hairpin, hepatitis delta virus, group I intron or RNasep-like RNA. These ribozymes may be used to infiliat chere animals by modulating expression of the corresponding gene.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Cleavage of target mRNAs expressed in pre-neoplastic and transformed cells elicits inhibition of the transformed state. Multiple drug resistance (mdr-1) mRNA specific ribozymes remove the mechanism of drug resistance used by transformed cells and thus enhances drug therapies for tumours. The ribozymes may also be used to study genetic drift and mutations within cells.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö

The present sequence represents a preferred target sequence for an enzymatic nucleic acid (i.e. a ribozyme) which cleaves mRNA coding for a protein of respiratory syncytial virus (RSV) at the nucleotide base position indicated in the DE line. Regions of the manna that do not form secondary folding structures and that contain potential hammerhead and hairpin ribozyme cleavage sites were identified by computer analysis. Ribozymes directed against these mRNA sequences were designed and synthesised with modifications that improve their nuclease resistance. The ribozymes cleave the target sequences and can be used for treatment and diagnosis of

                                                                                                                                                                                                                                                                                   ö
                                                                                             The present sequence represents a preferred target sequence for an enzymatic nucleic acid (i.e. a ribozyme) which cleaves mRNA coding for a protein of respiratory syncytial virus (RSV) at the nucleotide base position indicated in the DE line. Regions of the mRNA that do not form secondary folding structures and that contain potential hammerhead and hairpin ribozyme cleavage sites were identified by computer analysis. Ribozymes directed against these mRNA sequences were designed and synthesised with modifications that improve their nuclease resistance. The ribozymes cleave the target sequences and can be used for treatment and diagnosis of
                                                                                                                                                                                                                                                                                    Gaps

The present sequence represents a preferred target sequence for an enzymatic nucleic acid (i.e. a ribozyme) which cleaves mRNA coding for a protein of respiratory syncytial virus (RSV) at the nucleotide base position indicated in the DE line. Regions of the mRNA that do not form secondary folding structures and that contain potential hammerhead and hairpin ribozyme cleavage sites were identified by computer analysis. Ribozymes directed against these mRNA sequences were designed and synthesised with modifications that improve their nuclease resistance. The ribozymes cleave the trarget sequences and can be used for treatment and diagnosis of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps

Ribozymes directed against these mRNA sequences were designed and synthesised with modifications that improve their nuclease resistance. The ribozymes cleave the target sequences and can be used for treatment and diagnosis of
transplant rejection; rheumatoid arthritis; psoriasis; myocardial ischaemia; Kawasaki disease; septic shock; HIV; human immunodeficiency virus; acquired immune deficiency syndrome;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present sequence represents a preferred target sequence for an enzymatic nucleic acid (1.e. a ribozyme) which cleaves mRNA coding for a protein of respiratory syncytial virus (RSV) at the nucleotide base position indicated in the DE line. Regions of

PT Ribozymes having modified bases and methods for producing them - xx xx Claim 2; Page 276; 407pp; English.

XX Claim 2; Page 276; 407pp; English.

CC The present sequence represents a preferred target sequence for an enzymatic nucled; a ribozyme) which cleaves mRNA coding CC for a protein of respiratory syncytial virus (RSV) at the contectide base position indicated in the DE line. Regions of CC the mRNA that do not form secondary folding structures and that contain potential hammerhead and hairpin ribozyme cleavage sites contain potential hammerhead and hairpin ribozyme sites contain man sequences were designed and synthesised with modifications that improve their nuclease resistance. The ribozymes cleave the target sequences and can be used for treatment and diagnosis of XX Sequence 15 BP; 6 A; 4 C; 2 G; 3 U; O other;
